

# Craig Hawkes

I build the system, the product that sits on top of it, and the gates that hold both to whatever I claimed. Eight years running my own studio, and a payment platform migrated without it going down.

Fifteen years across development and design, and it's the code that came first. I work in React, Next.js, TypeScript and .NET. I've built a 117-component enterprise design system on my own and gated its accessibility claim with tests rather than asserting it in a README, then delivered live Fiserv payment infrastructure on a PCI-DSS estate with mobile payments up 80% from launch. Six years as a qualified print and digital designer sits in the middle, trained separately. Nothing on this page is an assertion.

## BPO Collections Ltd

Full Stack Developer

Sept 2025 - Apr 2026 • Contract

Rebuilt the payment flow on Fiserv and led the platform's migration off legacy ASP.NET onto typed Next.js, with the estate trading throughout.

80% more mobile payments since launch

- 70% of that increase came through Apple Pay, across both single and continuous payments, on a Fiserv integration built end to end.
- Reduced a four-screen payment flow to one interaction with no loss of compliance coverage, worth roughly £500,000 a month more through the platform.
- Migrated off ASP.NET with a PCI-DSS estate of 97+ stored procedures live throughout. The platform never came down.
- Planned and ran the production cutover: three runbooks split by server to enforce ordering, and a backout procedure written before deployment rather than during it.

Next.js • TypeScript • ASP.NET • SQL Server • Fiserv

## inclusive.io

Co-founder & Design Systems Engineer

Feb 2024 - Present • Part Time /  
Co-Founder

An enterprise design system and the applicant tracking product built on top of it, delivered single-handedly, with the accessibility claim enforced by gates rather than asserted in a document.

117 components • 26 ATS workflows • 0 axe violations • Solo build

- Every component ships with a unit test, a Storybook story and a documentation page, and all of it was delivered solo across two full rebuilds.
- Took a WCAG 2.2 AAA claim from an assertion to a register: 4 criteria enforced by test, 13 met, 3 exceptions published, 0 outstanding. 0 axe violations across 174 routes.

- Ran the build to a documented seven-phase framework, and produced 47 supporting documents. 18 research papers, 3 audit reports and a 14-document handover pack.
- Built with agent tooling throughout, held to the same gates as any other contributor. Rules and MCP servers live in the repo, and nothing merges unread.

React • Next.js • TypeScript • Tailwind • HeroUI • React Aria • Turborepo

## DesignBuddy UK

Founder & Full-Stack Developer

Oct 2017 - Present • Business

Founded and still run an independent studio, taking clients from the first conversation through to deployment and the support that follows it.

8+ years • 50+ clients

- Build and ship production front ends in React, Next.js and Tailwind, plus custom WordPress themes, Shopify storefronts and PHP back ends.
- Take clients from first conversation through to deployment and post-launch support, rather than handing off at the design file.

React • Next.js • TypeScript • Tailwind • Shopify • WordPress • PHP

## Paul McFadden Wealth

Head of Web

Dec 2022 - Jan 2024 • Full Time

Ran the web department for a property education group and the partner businesses selling alongside it, with every funnel, course platform and event page in the group coming through the team.

- Personally accountable for over £10m of revenue generated through the direct web funnels and event pages the department ran.
- Hired three of the team and co-managed the seven: five videographers, a junior web designer and a social media intern.
- Built four course-launch platforms end to end in WordPress and custom PHP, including ClickFunnels and Klaviyo integration.
- Shipped full-stack to WCAG accessibility standards, and rebuilt the campaign infrastructure: open rates up 60%, cold-outreach replies up 27%.

WordPress • PHP • JavaScript • HTML/CSS • Klaviyo • ClickFunnels

---

EARLIER

Aug - Dec 2022

Built conversion-focused sites and marketing systems across an agency client portfolio, three or four concurrently, to fixed deadlines.

- Developed custom WordPress themes and plugins in PHP, moving clients off template-builder setups onto purpose-built front ends.

---

**NOVAVAPES**  
Graphic Designer

Oct 2016 - Sept 2022

Sole designer for six years as the company scaled from startup to established brand, owning every surface from packaging to the e-commerce storefront.

- Designed and maintained the e-commerce storefront and product catalogues alongside the full brand system.
- Recruited and developed an apprentice from junior to running the social channel outright.

---

03 • SELECTED WORK

# Four things, and where to go and check them.

---

## **inclusive.io Design System**

V1 core on npm as @hawkbass/inclusive-design-core under MIT, with exports, types and client directives checked against the built tarballs.

---

## **Quoin: a baseline grid engine for the web**

Fits a design to a baseline grid before the CSS is written, and corrects a page that has already rendered when there is one. Public, MIT, no dependencies. Benchmarked against nine design systems including my own, which came last and was published that way.

# What I do, grouped by what it is for.

## ENGINEERING

- Next.js, TypeScript, Tailwind
- Fiserv, Open Banking, PCI-DSS
- ASP.NET modernisation

## RELEASE & PLATFORM

- Git, GitHub Actions, CI/CD gates
- Vercel, preview and production
- Cutover and rollback runbooks

## DESIGN SYSTEMS

- W3C DTCG token architecture
- OKLCH colour and component APIs
- ATS domain workflows

## RESEARCH & DOCUMENTATION

- Seven-phase design system framework
- Specification and handover packs
- Standards read first-hand, not second

## ACCESSIBILITY

- WCAG 2.2 AA gated, AAA where achievable
- React Aria interaction patterns
- axe-core and Playwright verification

## DELIVERY

- DesignBuddy: 50+ clients, 8+ years
- Brand, web, and product builds
- Discovery through launch

# The stack, in full.

This section is the one that only exists with Full detail on, because a one-page scan does not need it and a full CV does.

## FRONTEND CORE

React • Next.js • TypeScript

## FRAMEWORKS & LIBRARIES

Angular • React Aria / React Stately  
• Radix UI

## DESIGN SYSTEMS

Design Tokens (W3C DTWG) • OKLCH  
Colour • Atomic Design

## RELEASE, CI/CD & PLATFORM

Git • GitHub / GitHub Actions •  
CI/CD pipelines

## BACKEND & INFRASTRUCTURE

Node.js • ASP.NET (VB.NET & C#) • SQL  
Server / T-SQL

## TESTING & ACCESSIBILITY

WCAG 2.2 (AA gated, AAA where  
it holds) • axe-core / jest-axe  
• Playwright

## RESEARCH & DOCUMENTATION

Technical documentation • Design  
system specification • Competitive  
and standards research

## DESIGN & CREATIVE

UI/UX Design • Adobe Creative Suite •  
Brand Identity

## AI & AGENT SYSTEMS

LLM providers (OpenAI, Anthropic,  
Google) • Prompt & context design •  
MCP servers
